                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 26, Sequence 26, Sequence 26, Sequence 26, Sequence 5, Sequence 5, Sequence 2, Sequence 2, Sequence 2, Sequence 21, Sequence 21, Sequence 21, Sequence 21, Sequence 2, Sequence 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 4,

Sequence 2, Application US/09374597

Patent No. 6140082

GENERAL INFORMATION:

APPLICANT: Loosmore, Sheena M.

APPLICANT: Yacoob, Reza K.

APPLICANT: Zealey, Gavin R.

APPLICANT: Riein, Michel H.

TITLE OF INVENTION: Expression Of Gene Products From

TITLE OF INVENTION: Genetically Manipulated Strains Of Bordetella

NUMBER OF SEQUENCES: 56

CORRESPONDENCE: Sim & MCBULNEY

STREET: 330 University Avenue, 6th Floor
                                                                COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA:

GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Taninoto, Hirotoshi
TITLE OF INVENTION: TANG-15: An Extracellular Serine Protease Overexpressed in
TITLE OF INVENTION: Breast and Ovarian Carcinomas
FILE REFERENCE: D6064
CURRENT APPLICATION NUMBER: US/09/027,337B
CURRENT FILING DATE: 1998-02-20
NUMBER OF SEQ ID NOS: 13
                                                                                                  Sequence 4, Application PC/TUS9511684
GENERAL INFORMATION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: Determination of the primary structure of cholera toxin B subunit.
A;Reference number: A38033; MUID:78005536
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A.Map position: 1
C;Complex: the cholera enterotoxin molecule contains three kinds of chain C;Complex: the cholera enterotoxin molecule contains three kinds of chains ciate noncovalently with the subunit B, an aggregate of five beta chains C;Function:
A;Description: involved in binding of the toxin to cell membranes
A;Description: involved in binding of the toxin to cell membranes
C;Superfamily: cholera enterotoxin beta chain
E;1-21/Domain: signal sequence #status predicted <NGC>
F;22-124/Product: cholera enterotoxin chain B #status predicted <MAT>
F;30-107/Disulfide bonds: #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for residue 33 as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Molecule type: protein

R.Ohmachi, T.; Glorda, R.; Shaw, D.R.; Ennis, H.L.
Biochemistry 28, 525-5231, 1989
Biochemistry 28, 525-5231, 1989
A. Title: Molecular organization of developmentally regulated Dictyostelium discoideum
A. Reference number: A34080; MUID:89352609
A. Status: preliminary
A. Molecule type: mRNA
A. Residues: 1-380 < CMNA
A. Residues: GB-M2348
A. Experimental source: strain B, clone DCUB19
C. Superfamily: polyubiquitin 5; ubiquitin homology
C. Superfamily: polyubiquitin 5; ubiquitin degradation
F.1-76/Product: ubiquitin #status predicted <UBI>F:1-76/Domain: ubiquitin homology <UBHI>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
Nucleic Acids Res. 18:1825-1832(1990).

-!- FUNCTION: THE RNA DEPENDENT RNA POLYMERASE OF CORONAVIRUSES IS

A MULTIFUNCTIONAL PROTEIN: IT CONTAINS THE ACTIVITIES NECESSARY
FOR THE TRANSCRIPTION OF NEGATIVE STRANDED RNA, LEADER RNA,
SUBGENOMIC MENAS AND PROGENY VIRION RNA.

-!- CATALYTIC ACTIVITY: N NUCLEOSIDE TRIPHOSPHATE = N PYROPHOSPHATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE FROM N.A.
